

# Sexually Transmitted Infection (STI) Therapy Compliance Pre and Post Centers For **Disease Control and Prevention (CDC) STI Treatment Guideline Update**

Results

SERIOUS MEDICINE. EXTRAORDINARY CARE.\*

## Background

- December 2020, update to the CDC STI Guidelines published for the treatment of uncomplicated Neisseria gonorrhoeae (GC) and common co-infection, Chlamydia trachomatis (CT)
- Guideline changes reflected goals of antimicrobial stewardship and antimicrobial susceptibility
- Nebraska Medicine has a long-standing antimicrobial discharge culture follow-up program to ensure appropriate antimicrobial therapy has been prescribed

#### **Study Question**

Did the CDC STI Guideline update negatively impact therapy compliance for the treatment of STIs in the ED setting?

#### **Methods**

- **Design:** Single center, retrospective cohort study, February 1, 2020 to August 31,2021
- Patients: Split
- Primary Outcome: Appropriate, per CDC guidelines, STI treatment prescribed for ED visit
- **Secondary Outcomes:** ED patients still in need of STI treatment 30 days post ED discharge, ED patients lost to follow up at 30 days post ED discharge, repeat ED visit for STI within 30 days from initial ED visit
- Statistical Analysis: Descriptive statistics, independent sample t-tests, Fisher's exact test

#### **Inclusion Criteria**

#### **Exclusion Criteria**

- Age ≥19 years
- Treated for STI between 2/1/2020 - 8/31/2021
- Discharged from Nebraska Medicine ED

## Sexual assault

- Admitted for inpatient treatment
- Left ED against medical advice/refused treatment

#### Infection Status\*

2/1/2020 - 8/31/2020

- GC: Neisseria gonorrhoeae test positive
- **CT:** *Chlamydia trachomatis* test positive
- GC and CT: Neisseria gonorrhoeae and *trachomatis* tests positive
- Negative: Both Neisseria gonorrhoeae an trachomatis tests negative
- Empiric antibiotics: ED provider decisio antibiotics based on HPI and signs/sympt STI test

#### **Table 2. Primary and Secondary Outcomes**

|   | Pre-CDC<br>update<br>(N=338) | Post-CDC<br>update<br>(N=346) | p-value  |  |  |  |  |
|---|------------------------------|-------------------------------|----------|--|--|--|--|
| Primary Outcome   |                              |                               |          |  |  |  |  |
| Appropriate, per CDC<br>guidelines, STI treatment<br>prescribed for ED visit, no. (%) | 329 (98.2%)                  | 215 (62.7%)                   | < 0.0001 |  |  |  |  |
| Secondary Outcomes  |                              |                               |          |  |  |  |  |
| ED patients still in need of STI<br>treatment 30 days post ED<br>discharge, no. (%)   | 0 (0%)                       | 3 (0.87%)                     | 0.249    |  |  |  |  |
| ED patients lost to follow up<br>within 30 days post ED<br>discharge, no. (%)         | 0 (0%)                       | 3 (0.87%)                     | 0.249    |  |  |  |  |

## Results

| Insurance Payer Status |            |            |  |  |
|------------------------|------------|------------|--|--|
| Medicare /<br>Medicaid | Private    | Self-Pay   |  |  |
| 109 (64.9%)            | 37 (56.9%) | 69 (62.7%) |  |  |
| 59 (35.1%)             | 28 (43.1%) | 41 (37.3%) |  |  |

Decrease in guideline directed therapy prescribing driven by the change from azithromycin to doxycycline Appropriate ceftriaxone dosing was consistent ED pharmacists highly effective with patient follow-up Creation and integration of STI order panel/set to allow ED providers to search by STI indication for first-line

Retrospective study at a single institution Variable follow-up with ED patients and inability to assess PDMP data to determine doxycycline Rx

Lack of documentation regarding ED pharmacist intervention for adjustment of antibiotic dosing Pre-CDC update cohort includes early part of COVID-

#### Conclusions

The update to the CDC STI Treatment Guidelines led to decreased guideline directed therapy prescribing in an academic medical center ED

There was no difference in ED patients still needing treatment, lost to follow-up, or repeat ED visits for STI within 30 days post ED discharge

The Nebraska Medical Center ED provides STI care for many patients and has an effective ED pharmacist antimicrobial and discharge culture follow-up
